Creating an Integration
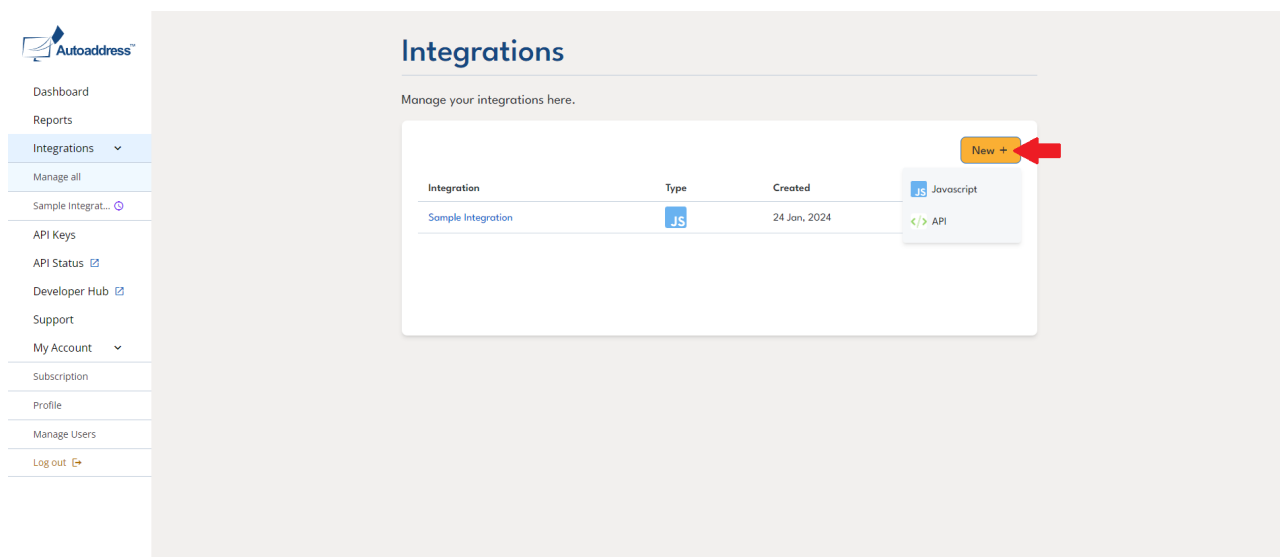

07/15/2024 7:14 am EDT

Introduction

Once you have signed up and logged in to the Account Center, it's time to create an Integration. This will create an API key for use on your application and allow you to configure settings based on your requirements.

Creating an Integration

To start, navigate to *Integrations* from the menu and click the *New +* button. From here, select the integration type that is most relevant.

Give the Integration a name and select the *Create* button. The preview page for your integration will open.

Retrieve API Key

When creating any Integration, you will be able to access the API key associated with it. To do so, navigate to *Settings* and you will see they key under API Key.
